SUMMARY

Software engineer with 2+ years of experience, including internship, at OpenText. Builds reliable AI-agent prototypes and backend workflows involving retrieval, memory, validation, observability, and automation.

PROFESSIONAL EXPERIENCE

Associate Software Developer | OpenText
Oct 2024 – Present | Bengaluru

- Built a case-aware dual-memory agent combining enterprise RAG with reusable case memory. In staged evaluation, escalations fell from 20 to 5; latency, tokens per ticket, and model calls per ticket also declined.
- Prototyped a CVE workflow spanning advisory ingestion, normalization, inventory matching, and network-automation remediation; estimated about 60% less manual triage effort.
- Built a time-series baseline service that routes between raw 5-minute observations and hourly aggregates for scalable observability queries.
- Redesigned UUID storage in a distributed cloud-connectivity service, increasing supported inter-region connections from 55 to 165 without a database schema migration.

Software Engineering Intern | OpenText
Apr 2024 – Sep 2024 | Bengaluru

- Built Python and SQL automation for license-usage extraction and CSV reporting, replacing repetitive manual reporting work.

SELECTED PROJECTS

Capability Runner
Built LLM-assisted browser workflow discovery and model-free saved-workflow replay with action validation, page-evidence checks, expected-error handling, and human takeover for unsupported states.

Ticketless IT/HR Voice Support
Built an IT/HR support prototype combining voice interactions, VLM/OCR screen understanding, enterprise RAG, LangGraph orchestration, human approval, and structured verification before closure.

SyncStream
Built a CDC prototype using PostgreSQL, Debezium, Kafka, Redis, and Elasticsearch for independent data projections; it does not claim production recovery or exactly-once processing.

TECHNICAL SKILLS

AI & agents: LangGraph, MCP, RAG, embeddings, vector retrieval, tool calling, evaluation, PyTorch
Backend & systems: Python, Java, FastAPI, Spring Boot, REST APIs, WebSockets, Linux
Data & infrastructure: PostgreSQL, Kafka, Redis, Elasticsearch, Docker, Kubernetes, Git, CI/CD
Languages: Python, Java, Go, C++, SQL

EDUCATION & RESEARCH

B.E. Electronics and Communication Engineering | 2024
Sri Krishna College of Engineering and Technology | CGPA 8.5/10

Adaptive Compute Efficient Learning via Conceptual-Criticality
Co-author, AAAI 2026 Student Abstract
Proof of concept studying adaptive computation. Reported energy comparisons are estimates against an extrapolated 6-layer baseline.

AWARDS & RECOGNITION

CVE agent and customer demonstrations (Put Customers First, 12 February 2026) · Raw-data sleeve visualization (Raise the Bar, 25 July 2025) · Dark mode, reporting and Azure backend (Raise the Bar, 14 February 2025) · AWS and Azure network visualization (Raise the Bar, 24 January 2025)
